

Medical Malpractice and Negligence Dr. Jicha

UK Neurology – Dr. Gregory Jicha Failures & Violations

- **Refusal to Provide Guidance:** Declined to meet for months despite repeated urgent requests; met only to push “behavioral contract” which patient was not even told about prior to appointment and expressly rejected.
- **Intentional Misrepresentation & Defamation:** Characterized patient’s pursuit of care as behavioral/psychiatric problem, ignoring extensive objective medical evidence and still refusing to provide care.
- **Refusal to Document Findings:** Did not acknowledge FDG-PET showing cortical hypometabolism (patterns seen in frontotemporal involvement), NeuroQuant atrophy (frontal 2nd percentile, brain 9th percentile), or new spinal lesions (T7/T8, L2). All ignored by Jicha.
- **Fraudulent Record Entries:** Did not correct false “Bone Cancer” diagnosis – or if real – did not clarify who, what, when, how, why I was not told - or numerous omissions/minimizations and other fraudulent entries in chart.
- **Refusal to Order or Refer:** Refused/refailed to provide urgent referrals to Cognitive Neurology, Neurosurgery/Spine Oncology, Infectious Disease, Hematology, or Vascular Surgery. No follow-up for PET, LP, MRIs, copper infusions, or Doppler studies despite critical and urgent need.
- **ADA/RFRA Non-Compliance:** Ignored ADA accommodation letters, RFRA-protected spiritual disclosures, and failed and refused to ensure accommodations in care or chart.
- **Threats & Intimidation:** Attempted to coerce patient into “behavioral contract” limiting rights; threatened termination of care – patient did not yield – no such contract exists despite forceful and wrongful attempt by UK.
- **Obstruction of Mandated Reporting:** Refused to act on life-threatening findings despite statutory and ethical duties.

Impact:

- Patient deprived of ongoing urgent care for documented brain, spine, hematologic, and infectious disease findings.
- Ongoing falsification and suppression of medical record evidence.

Medical Malpractice and Negligence Dr. Jicha

- ADA and RFRA violations, defamation, and denial of federally protected rights.
- Heightened risk of irreversible neurological damage, disability, or death.

To attorneys – I want to be around for my child for as long as I can. My child is 14 and needs me. Please help. In many ways, it is already too late. I cannot restore the brain function I have already lost. I cannot regain brain volume. I cannot turn back the clock and force providers to do their jobs. If I had not been such a strong advocate for myself to this point, I probably would already be gone. Please do not let them force further brain damage, refuse further care such as regarding the spinal tumors and follow up imaging for the brain, please do not let them force deprive my body of vitamins and minerals when infusions for the deficits exist...Please do not let them continue to place lie after lie after lie in my record and refuse corrections and the same for my child... please help with everything that you can, and if something is outside your scope, please refer me to an attorney that can handle the out of scope portion. I can no longer try to fight this all alone, and need your help, sincerely, please...
